

LET'S FUTURE-PROOF THE NEXT GENERATION

Enterprise skills like money management, commercial awareness and problem solving help young people get into full-time work 17 months faster than their peers post study.

THAT'S WHAT MAKER KIDS CLUB PROVIDES

Our online program for 11 year olds takes students all the way from brainstorming to launching and running their own micro-businesses in one hour a week for 14 weeks so our graduates learn these much-needed enterprise skills. Teachers love us as we've made their life easy with no preparation or professional development required. Students love us as they have fun creating their products and services, and have the opportunity to earn money. Parents love us as they watch their child's confidence blossom.

TOGETHER WE CAN REACH THOSE MOST IN NEED

Our program is low cost - just \$40 per student. That's still out of reach for some schools - especially public schools in low socio-economic index (SEI) areas. It's the students at those schools who perhaps need our course most so they have the skills to earn an income and a better chance of improving their financial situation.

Today we are asking you to co-sponsor two low socio-economic index (SEI) schools for five years each to build a culture of business thinking in their community.

Primary schools average 50 Year 6 students each. By covering half the \$40 cost of the course (we'll cover the other half) your commitment is \$2,000 a year for five years. A small price to pay to change the lives of 500 kids in that time.
